Overall, how satisfied are you with the way the tool described in the video would help you draw/annotate on template(s)/patient image(s)? ⓘ

Please indicate your agreement with the following statements ⓘ

What is the single best part of this new tool as described in the video? ⓘ

Saving the templates

...

Saving templates. Available in PE

...

more options

...

The addition of a shapes tool.

...

Ability to upload templates

...

The ability to annotate images or procedure documentation, as well as the ability to edit in the future.

...

What is the single most important way this tool could still be improved for you? ⓘ

Need to be able to free hand into jotter not just draw on anatomical drawings or photos

...

Add it to the A/P section

...

none

...

There needs to be a better image of the female external genitalia. They show this virginal image and we need an image with better definition of the labia and non virginal introitus. The breast image would be better if it was closer in and had the breast marked into quadrant and showed the arms up with the axila visible. The shape options would be better if they included an elliptical or ovoid mass and a circular one.

...

Being able to edit text once it's written on the drawing.

...

How helpful would the new shape tool be for annotating templates/patient images? ⓘ

An unexpected error has occurred.

How helpful would undo/redo be for annotating templates/patient images? ⓘ

 An unexpected error has occurred.

How helpful would zoom in/out be for annotating templates/patient images? ⓘ

 An unexpected error has occurred.

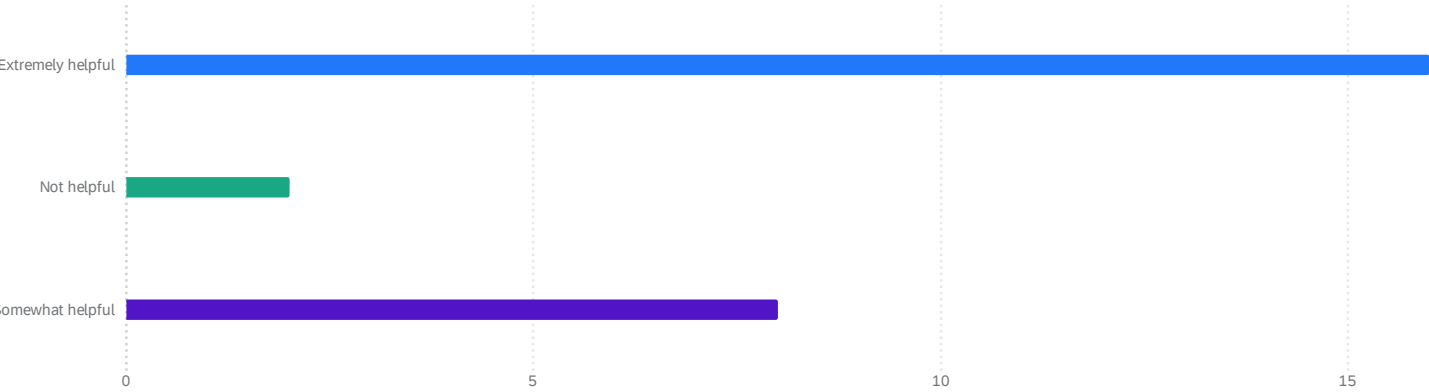

How helpful would the new dropdown menu be for finding templates? ⓘ

 An unexpected error has occurred.

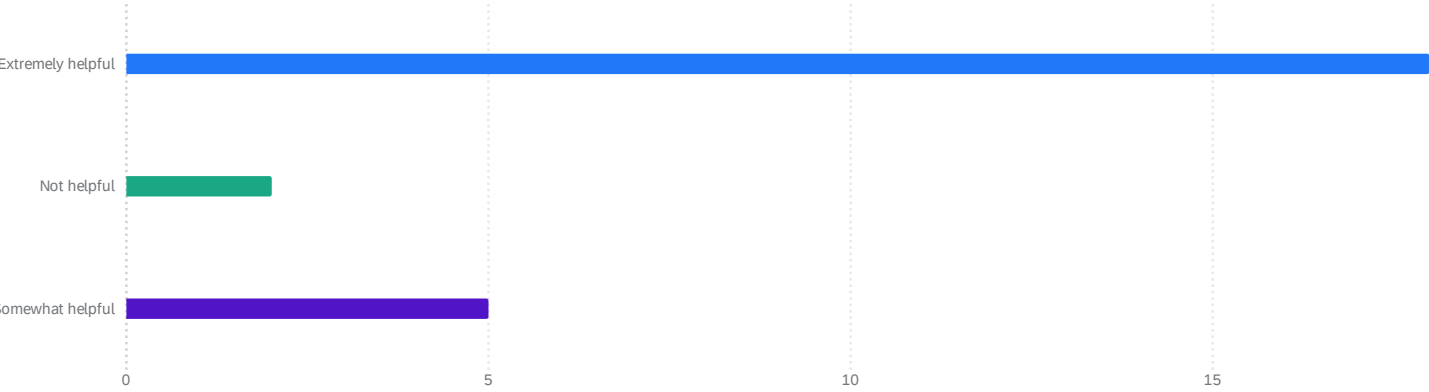

How frequently do you use the admin page to upload your custom templates? ⓘ

 An unexpected error has occurred.

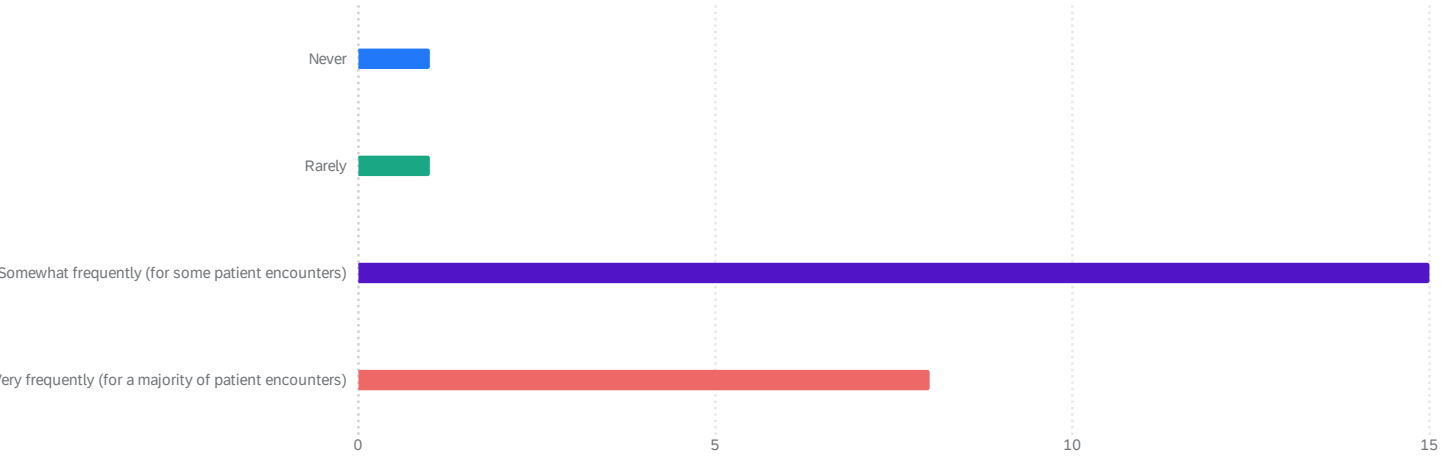

Currently, uploading templates can be done through the admin page, where templates can be uploaded and saved to a local table (the list that you see when you open the Jotter tool). How helpful would the new upload functionality be for uploading your own templates within the Jotter tool as opposed to uploading templates through the admin page? ⓘ

We want to implement a feature to the Jotter tool which will allow users to upload patient images/procedure images for the current encounter. Users will be able to draw/annotate on the image using the Jotter's tools. This image will be tied to the current encounter. How helpful would the ability to upload a patient image/procedure image to the Jotter for one patient encounter be for your practice? ⓘ

How helpful would the new label tool be for annotating on templates/patient images? ⓘ

Please use this space for any additional feedback you would like to share. ⓘ

- Would love jotter tool function in A/P section as well⋮
- The image for the back of the female head has hair on it. It is not possible to document a trauma or laceration since it does not show landmarks. Please update it. It looks like a 5 year old drew it.⋮
- Would I be able to use a stylus on a touch screen? This would be much easier⋮
- Thank you for doing this. It would be helpful if patients could access this jotter tool as well. It would be particularly helpful for the HPI section where they could note details about their pain on an anatomical diagram.⋮
- All I need to use jotter effectively is a drawing pad and stylus which works very well and seamlessly integrates with jotter. Mouse drawing doesn't work for detailed eye/retina drawings.⋮
